LEGO Lore Site Plan

Stewart Smith

WDD 130

Overview

Purpose

To provide a brief overview of the history of LEGO products in a fun and functional format.

Audience

People that enjoy LEGOs or people who would be interested in learning more about them.

Elevator Pitch

I'm making a website based on LEGO sets. The site takes visitors on a trip through LEGO history. It starts with early sets that helped LEGO become popular and then shows newer sets that changed how people build today. There are pages on Star Wars and Lord of the Rings that explain how each series brought new ideas and helped LEGO reach more fans. The site is special because it tells the story of LEGO over time. Each set is shown as part of a bigger timeline, so visitors can see how LEGO has grown and changed into what we know now.

Heading – Welcome! (hero.webp)
Paragraph – The purpose of this site is to show people LEGO sets throughout the years, and go over a few notable franchises. There is a timeline below with an overview of the history, and there are pages on the LEGO Star Wars and LEGO The Lord of the Rings franchises.

Heading - Timeline

1949 - Automatic Binding Bricks (automatic-binding-bricks.jpg)
The beginning of LEGO bricks as we know them today. This was a very basic set with little variety, but would lay a foundation for the LEGO we know today.
1956 - Gift Package (gift-package.jpg)
Larger "Gift Packages" much like this one contained a variety of bricks, though they were lacking in the instructions we know today.
1961 - Individual Brick Packs (numbered-bricks.jpg)
Individual brick packs much like this one were where one could get more variety for their LEGO products.
1968 - Motorized Train Set (motorized-train.jpg)
This is an early train set made by LEGO, near the beginning of the longest-lasting LEGO series, LEGO Trains. The trains would go through many transformations throughout the years.
1969 - LEGO Duplo (duplo.jpg)
This franchise is catered for young children below the age of 5. Featuring larger bricks than traditional lego, which helps prevent the bricks from being swallowed by young children, these bricks are still able to fit with regular size LEGOs.
1974 - Antique Car (antique-car.jpg)
This is one of the first sets that bears resemblance to the LEGO that we know today. With instructions for building and posable figures one could say this is where LEGO truly began.
1977 - LEGO Technic (technic.webp)
Introduced as Expert Builder or Technical Sets, this franchise uses special pieces such as gears and axles to make more complex sets than traditional LEGO. Technic pieces are included in other franchises, often to make things happen around the set.
1978 - Castle (castle.png)
This early set, simply known as "Castle", would start one of the more well-known LEGO franchises, LEGO Castle. Featuring knights and castles, many people's first experiences with LEGO is with this franchise, which would discontinue in 2013.
1978 - Legoland Town (legoland.webp)
This franchise (also known as "Town") launched at the same time as LEGO Castle and LEGO Space, showing more of the "everyday" compared to the other two settings. The franchise would eventually rebrand to LEGO City in 2005, which has sets still releasing today.
1979 - Space cruiser and moonbase (galaxy-explorer.png)
This early set is an old favorite of many, kicking off the LEGO Space franchise. This franchise would end the same year as LEGO Castle.

1989 - Black Seas Barracuda (black-seas-barracuda.png)
This set would kick off the LEGO Pirates franchise, which came to an end in 2015. This franchise would hold a similar place as LEGO Castle, with many people's early sets being from this franchise.
2001 - LEGO Creator (creator.png)
This franchise didn't have an identity until 2006, where the first sets to use "3-in-1" labeling were created. This would go on to be the hallmark of LEGO Creator.
1999 - LEGO Star Wars (star-wars.png) <link to Star Wars page>
This franchise is discussed in detail on the Star Wars page of this website.
2001 - Bionicle (bionicle.webp)
One of the most-selling properties of LEGO, Bionicle was the first LEGO franchise to include an overarching storyline. The story may have been what drew so many people into the franchise, and there are many Bionicle fans today. There is even an event know to the community as "The Dream", which most Bionicle fans have experienced at some point in their lives.
2008 - LEGO Architecture (architecture.jpg)
First started as a passion project, LEGO took interest and began to produce LEGO models of famous landmarks. These sets can sometimes be found in post offices and doctor's offices.
2011 - LEGO Ninjago (ninjago.webp)
The sets in this franchise launched around the same time an animated TV series under the same name released. The series would soon gain large popularity, and many people still watch it today. Most people that have heard of LEGO have also heard of Ninjago.
2012 - LEGO Friends (friends.png)
Before the franchise launched, a computer game was released in 1999 under the name LEGO Friends. This "experiment" wouldn't have much implication until 2012, when the sets started releasing. They would be accompanied with a non-LEGO animated TV series, which may have been spurred by the success of LEGO Ninjago. The franchise would see a reboot in 2022.
2012 - LEGO The Lord of the Rings (lotr.jpg) <link to Lord of the Rings page>
This franchise is discussed in detail on the Lord of the Rings page of this website.
2013 - Legends of Chima (chima.jpg)
Coinciding with the release of yet another television series under the same name, LEGO Legends of Chima was received with a warm welcome, though for whatever reason it was never as popular as Ninjago. This may be why the franchise was discontinued in 2015, though there are no official sources on this.
2014 - The Lego Movie (lego-movie.jpg)
A hit success of 2014, this movie gained a large fanbase and saw massive popularity. The film mimics the stop-motion animation style of popular "Brickfilms", though the animation is CGI. The film would inspire the production of The LEGO Batman Movie, The LEGO Ninjago Movie, and The Lego Movie 2.
2015 - LEGO Speed Champions (speed-champions.webp)
This franchise is designed with adults in mind, setting it apart from many of the other LEGO franchises. The franchise includes cars in LEGO form, and it has been very well received.

Star Wars

Heading – LEGO Star Wars (star-wars-hero.jpg)

Paragraph – Perhaps one of the most prominent LEGO franchises of all time, LEGO Star Wars has a long history. First launching in 2000, LEGO had a license from 1998-2009, but after the success of the franchise they extended multiple times, and they are currently licensed until 2032.
Heading – Prominent Sets
Paragraph – These are some sets that stand out among the rest.
AT-AT (at-at.png) – This set is very large and is well known for its incredible attention to detail. This set is to scale with a minifigure, which makes it one of the largest that LEGO has made to date.
Death Star (death-star.jpg) – This set is the second of the infamous Death Star, but the first to come with minifigures. The inside shows different scenes from the movies.
Death Star (big-death-star.png) – Though there is already another Death Star on this list, this one is included due to its incredible size. This set is the largest LEGO Star Wars set to date.
Imperial Star Destroyer (star-destroyer.jpg) – This set is quite large, granting homage to the original ship. Making one of these to scale would take an astronomical amount of LEGOs.
Millennium Falcon (millennium-falcon.png) – The Falcon has gone through many different models, starting with the original and making its way forward (and backward) in time. This one is the biggest, but the others are no less impressive.
Mos Eisley Cantina (mos-eisley.png) – This set is well-beloved in the community due to the large amount of minifigures included. The model has a hinge that allows it to open from the center.
Slave 1 (slave-1.jpg) – This set is the only LEGO set to include the canopy piece used, making it one of the rarest LEGO pieces to date. The set itself is also impressively to scale.
Venator-Class Republic Attack Cruiser (venator.png) – This one is mostly here because I find it cool. This ship comes from the prequel trilogy, though it is especially highlighted in the Clone Wars TV series.
X-Wing (star-wars.png) – This set, released in 2000, is impressively modern compared to the time it came out. As one of the first four LEGO Star Wars sets, it set a standard that has been well kept.
Heading – Video Games
LEGO Star Wars: The Video Game (2005) (the-video-game.webp) – The start of it all. This game included episodes I-III, and used Dexter's Diner as a hub world.
LEGO Star Wars II: The Original Trilogy (2006) (the-original-trilogy.webp) – This game included episodes IV-VI, and featured the Mos Eisley Cantina as its hub world.
LEGO Star Wars: The Complete Saga (2007) (the-complete-saga.webp) – The other two games combined into one feature, with bonus levels and plenty of improvements. It is well regarded as the best of the LEGO Star Wars video games.
LEGO Star Wars III: The Clone Wars (2011) (the-clone-wars.webp) – With the success of the Clone Wars TV series LEGO created a video game following the events of the first season. While a fun game with plenty of unique features it is less well known than the other games.
LEGO Star Wars: The Force Awakens (2016) (the-force-awakens.webp) – This game came out on the foot of the seventh film's release. It included a surprising amount of content despite it only covering a single movie.
LEGO Star Wars: The Skywalker Saga (2022) (the-skywalker-saga.webp) – The latest game, including all nine films in a single game. Due to its scale it has received some critique for abridging too much.

Lord of the Rings

Heading – LEGO The Lord of the Rings (lotr-hero.jpg)
Paragraph – The most impressive thing about this series of sets is the sheer size of some of them. The video game is also regarded as one of the best that LEGO has made.
Heading – Prominent Sets
Weathertop (weathertop.jpg) – One of the most iconic scenes from the movies brought to life in LEGO form.
The Mines of Moria (moria.jpg) – This set is one of the largest of the original release of sets, with a mechanism that makes the door open and close.
The Battle of Helm's Deep (helms-deep.jpg) – Many a fellow thought the battle of Helm's Deep was one of the most impressive parts of the movies. This set brings some of that to life.
Heading - Reboot
Paragraph – In 2022 LEGO began to release The Lord of the Rings sets again.
Barad-dûr (sauron.png) – This impressive set shows off the Dark Tower of Sauron. A little-known fact is that the "eye" of Sauron is not an eye, but Sauron's silhouette wreathed in flames.
The Shire (shire.png) – This set shows a time of peace, before the journey. One can feel the peacefulness of the Shire while looking at this set.
Rivendell (rivendell.png) – This impressive set shows Rivendell in most of its glory. With an impressive level of detail this set is one of LEGO's largest.
Heading – Video Game (lotr.jpg)
Paragraph – There is only one LEGO The Lord of the Rings video game, but it's a good one. Including collectible Mithril bricks alongside the ever-present red bricks, Mithril can be used to make legendary artifacts, given you have the blueprints. This gives rise to some useful items that anyone can use, such as a bow that freezes the enemies it hits and items that allow characters to perform actions they usually wouldn't be able to. All, however, pale in comparison to the Mithril Disco Phial. While this thing provides light, that is but its secondary purpose. Its true strength lies in the sick beats that play when it is equipped, which causes allies and enemies alike to bust a move.
